WHEREAS the returning officer of the MUNICIPALITY is responsible for the application of this agreement and the means necessary to carry it out;

THEREFORE, the parties agree to the following:

1. PREAMBLE

The preamble to this agreement is an integral part of the agreement.

2. INTERPRETATION

Unless stated otherwise, expressly or as a result of the context of a provision, the following expressions, terms and words have, for the purposes of this agreement, the meaning and application given in this section.

2.1 “electronic voting system” means an apparatus consisting of the following devices:

— a main station used to place the terminals in “election” mode, to unlock the voting terminals, to place the terminals in “end of election” mode, to read the meter of each voting terminal, and to record the results; the main station can control up to six (6) voting terminals;

— one or more voting terminals used to vote, including a graphical representation of a ballot paper with space for a photo of the candidates;

— one or more printers;

2.2 “voting terminal” means a device integrating a ballot paper into its upper surface and push buttons used by electors to vote;

2.3 “paper trail of the vote” identifies the print-out of the voting operation (audit) sent to the sealed printer via the main station;

2.4 “cancelled vote” means a vote for which the button corresponding to “I do not wish to vote” for the office of mayor or “I do not wish to vote” for the office of councillor has been pushed by an elector on the voting terminal.

3. ELECTION

3.1 For the purposes of the general election of November 2nd, 2003 in the municipality, a sufficient number of “Votex” model electronic voting systems will be used.

3.2 Before the publication of the notice of election, the municipality must take the necessary steps to provide its electors with adequate information concerning the testing of the new method of voting.

4. SECURITY MECHANISMS

Each electronic voting system must include the following security mechanisms:

(1) a report identifying the main station and displaying a total of “zero” must be automatically produced by the main station when a voting terminal is turned on on the first day of advance polling and on polling day, for each candidate;

(2) the sequential voting reports are progressively printed by a sealed printer;

(3) a key mechanism placing the main station and its voting terminals in “election” mode; the key is then removed from the main station and is kept by the person responsible for the main station; the mode in which the main station operates can only be changed with the insertion of the key into the main station;

(4) after an elector has voted, the voting terminal is automatically locked for a 30 second interval in order to prevent an elector from voting more than once;

(5) the main station must be equipped with a back-up power source (battery) able to operate for two to three hours, unless it is connected to a generator;

(6) if a voting terminal is defective, then it is immediately replaced by another voting terminal in order to allow the poll to continue;

(7) if the main station is defective, then it is immediately replaced by another main station and by another sealed printer in order to allow the poll to continue; the votes already entered will be recovered at the closing of the poll, either by a technician mandated by TM Technologie inc. who will carry out the reading of the meters of the defective main station, or by a manual calculation of the paper trails of the votes.

5. CONFIGURATION

Each electronic voting system used is specially configured by the firm TM Technologie inc. for the municipality in order to receive and tally votes in accordance with this agreement.
